公司简介
Company Profile

DachongmingSteel Ltd is a comprehensive, modern and high-quality enterprise integrating steel production, processing and sales.Since its establishment, the company has developed rapidly.It has established long-term and stable cooperative relations with Shandonglron and steel, Rizhao Iron and steel, Shanxi Taiyuan Iron and steel, Shanghai Baosteel, Xiwang special steel and other domestic steel mills. It is the first-class agent of each steel plant and has been selected as excellent agent and excellent cooperation unit for many times. In order to better serve customers, the company has established a professional foreign trade team to solve one-stop steel export business for customers.The annual sales volume of the company is more than 300000 tons, and the sales volume has hit new records repeatedly. The company has formed a complete sales and service system based on East China and facing customers all over the country, with Wuxi, it owns an experienced steel product marketing team.
The company has a good reputation, high-quality products, strong strength and low price, and our products are deeply relied on by users.

达冲鸣钢铁是一家从事钢板、钢卷、钢管、型材及棒材等产品的研究、加工、生产和销售的专业厂家。材质涵盖了碳钢、合金钢、不锈钢、铝材、铜材、彩涂、镀锌等。

我公司年销售量超过100万吨，有1500多种规格。我厂拥有先进的设备,包括热轧生产线两条、冷轧生产线50条、冷拔生产线45条、激光切割机、开平机、分条机、飞剪机、发丝加工机、抛光机、折板机等。

我们有严格的质量控制体系，检测是必要的，欢迎SGS检测或其他第三方检测，质量是我们生存的唯一途径!

我们的产品广泛应用于机械加工、餐具、厨具、医疗器械、石油化工、家用电器、汽车配件、建筑装饰等领域。

我们的产品以优良的产品质量和极具竞争力的价格在国内外市场.上广受欢迎。

达冲鸣钢铁有超过二十年的钢铁产品行业经验和出口经验。我们的客户遍布全球地。期待我们能双方共赢，共创辉煌。

资质证书
QUALIFICATION CERTIFICATE

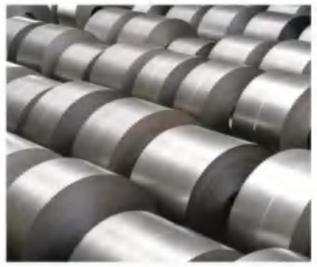

钢卷系列
Steel coil series

不锈钢卷 Stainless steel coil

Stainless steels are defined as ferrous alloys with the addition of at least 10.5% chromium by weight and are essentially low carbon steels containing significant amounts of chromium. It is the addition of chromium that gives this type of steel its corrosion resisting properties. Stainless steel coil is used for a huge variety of applications in many diverse industries including nuclear, pharmaceutical, food processing, petrochemical, architecture, and chemical transportation.

碳钢卷 Carbon steel coil

Carbon steel coil has the advantages of uniform coating, strong adhesion and long service life. Carbon steel coil products are mainly used in construction, light industry, automobile, agriculture, animal husbandry, fishery and other industries. Such as building roofs, highway guardrails, sheet metal processing, roof grilles household appliance enclosures, vention ducts, chimneys,kitchen utensils, grain storage and transportation, frozen processing of meat and aquatic products, etc.

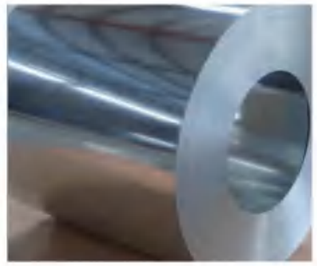

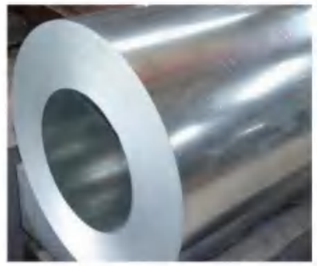

镀锌钢卷 galvanized coil

We adopted the UEC hot dip galvanized process which is the most advanced and wild used in the world .The main specification of product is 0.20-0.80mmx800-1250mm. We could manufacture high performance of GI with high zinc coating, none-spangle ,minimum spangle ,regulatr spangle or big spangle along with the advanced processing of oiled or skin-passed. The proudct can be used in building materialas ang electrical appliance .

彩涂系列
Color coating series

Color coated coil （彩涂卷）

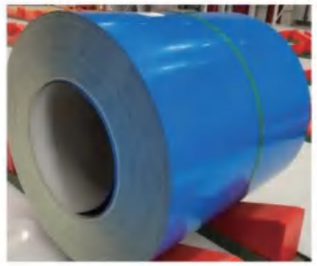

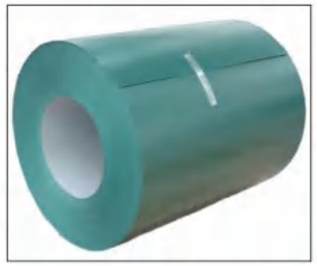

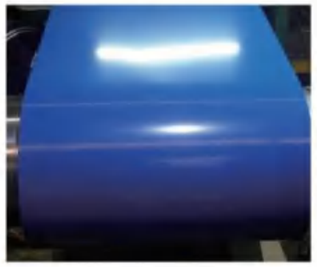

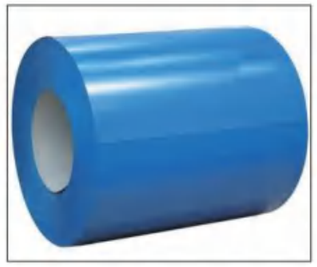

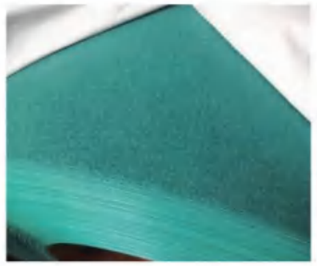

Top paint film:RPE, SMP, HDP,PVDF,Other paints.
Function: It functions as a sunlight proof cover, especially prevent the destroy by the ultraviolet rays. When the top paint film reaches a certain thickness, it forms a compact cover, and reduce the water and oxygen permeability.
Primer paint film:Polyurethane, Epoxy, PE
Function:Strengthen the adhesiveness between the top paint film and the basemetal. Even permeable water happens, the top paint film will not peel off. There is corrosion inhibitor which is corrosion resistance. Polyurethane is necessary for higher processing flexibility and weather resistance requirements.
Passivation layer Function:Increase the adhesion between the metallic layer and coating film. Extend life span also.
Metallic coating Function:The metallic coating provides the fundamental protection for the steel.
The popular coating metal are galvanize, galvalume and other alloyed metals.
Substrate steel Cold rolled steel is usually used as substrate, it decides the mechanical properties and the steel shape and flatness.
Back paint film Epoxy, Modified PE. Back paint can sustain color in good condition and has good binding.

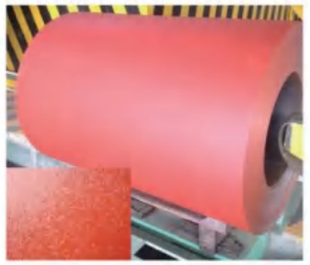

Color coated coil （磨砂卷）

Color coated coil （皱纹板）

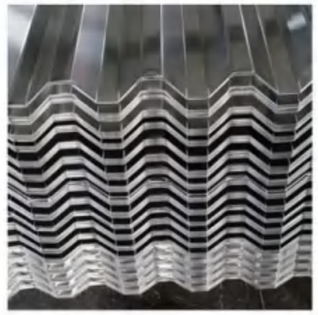

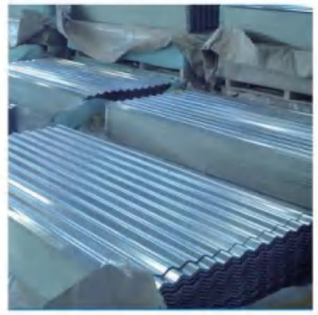

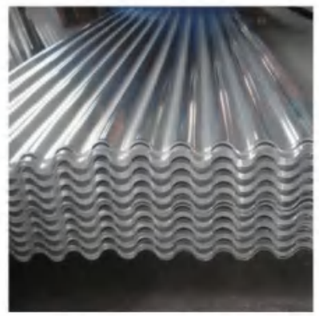

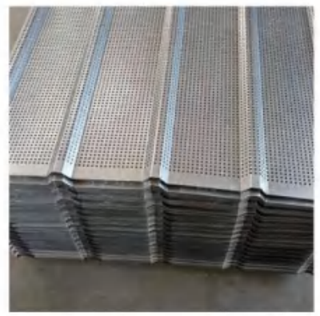

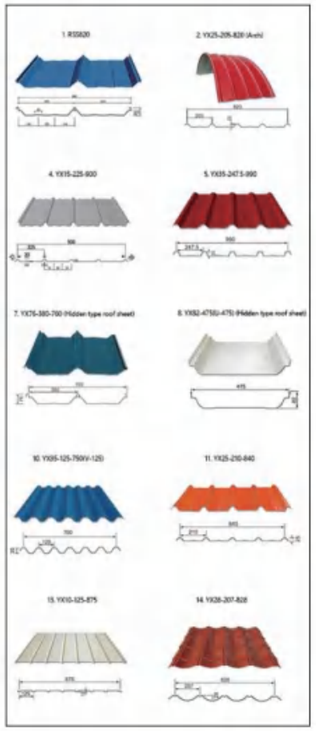

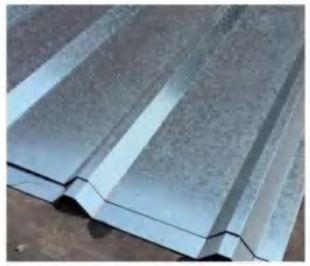

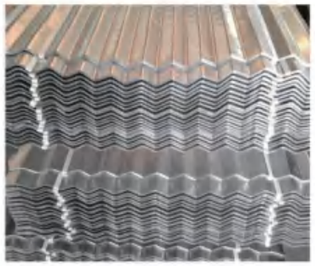

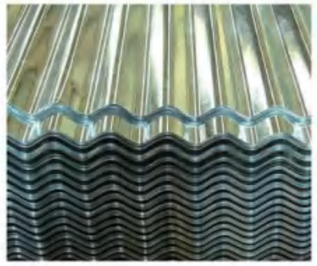

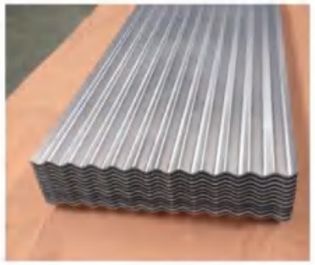

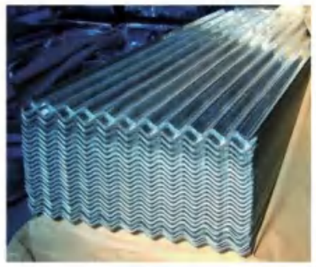

屋面板系列
Roof panel series

Roof sheet is suitable for roof, wall and internal and external wall decoration of industrial and civil buildings,warehouses,special buildings and long-span steel structure houses. It has the characteristics of light weight, high strength, rich color,convenient and fast construction, earthquake resistance, fire prevention, rain proof, long service life and maintenance free. Because of its good plasticity, it can better meet the requirements of various architectural

不锈钢屋面板 Stainless steel roof panel

镀锌屋面板 Galvanized roof panel

Galvanized roof plate, also known as galvanized steel corrugated tile, is made of galvanized steel plate, cold bending and rolling into a variety of wave plate.

Galvanized steel roof panel is widely used in many fields

1, all steel structure workshop frame

2, single side color steel plate steel structure workshop

3. Multi-span steel structure workshop

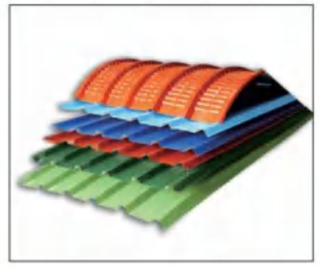

4. Plants are driven by wood beams

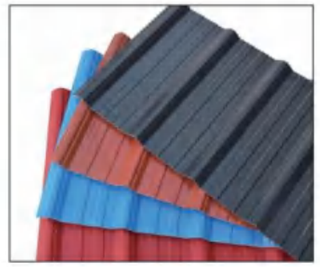

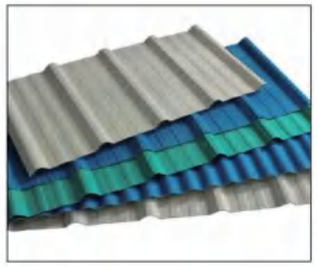

5, villa galvanized steel office

6, even cross painted galvanized steel ceiling

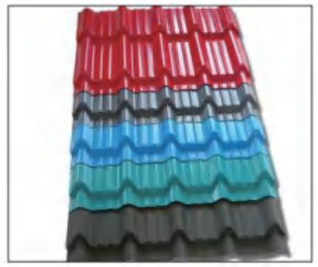

7. Add layers to the roof

彩涂屋面板 Color coated roof panel

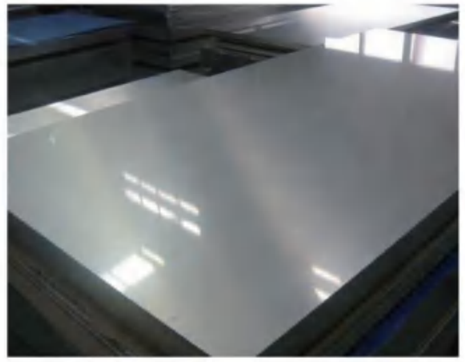

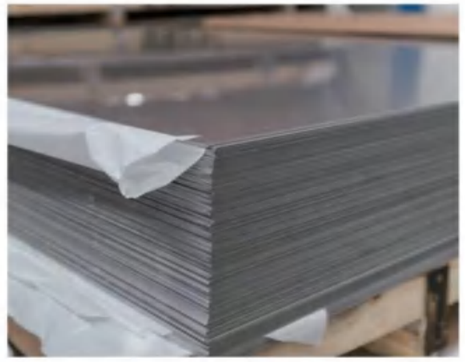

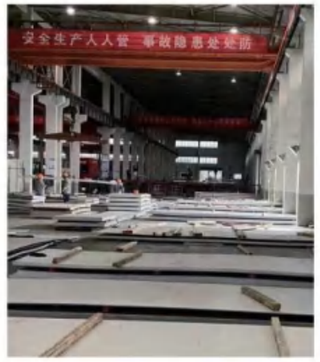

Color coated plate is widely used, with no pollution, weather resistance, corrosion resistance, high processability characteristics. Color coated board is generally widely used in industry, construction, home appliances, packaging, machinery and other fields. It involves processing, transportation, interior decoration, medical treatment and automobile industry

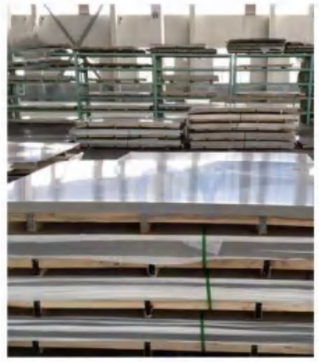

钢板系列
Steel plate series

不锈钢板 Stainless steel plate

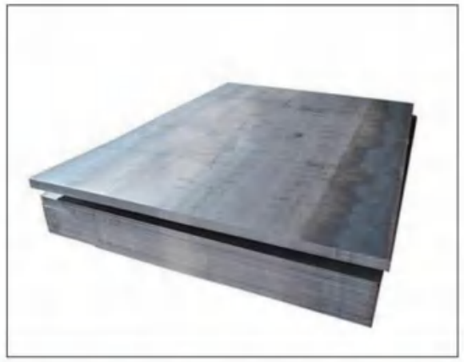

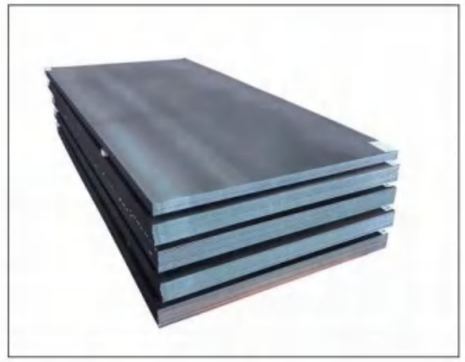

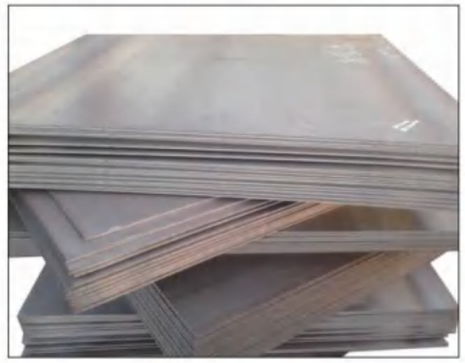

It is widely used in high temperature applicIt is widely used in high temperature applications, medical devices, building materials, chemistry, food industry, agriculture, ship components.
It also applies to food, beverage packaging, kitchen supplies, trains, aircraft, conveyor belts, vehicles, bolts, nuts, springs, and screen

碳钢板 Carbon steel sheet

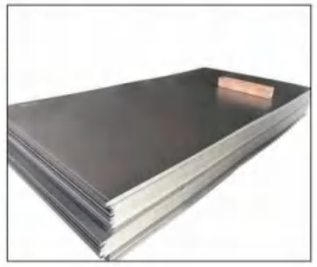

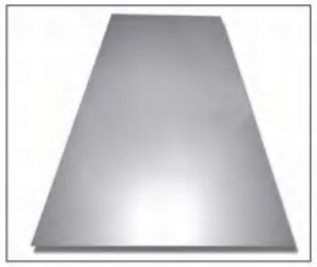

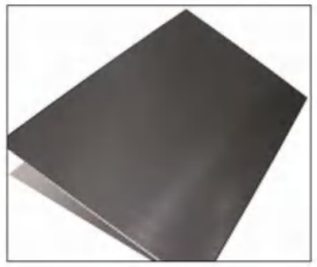

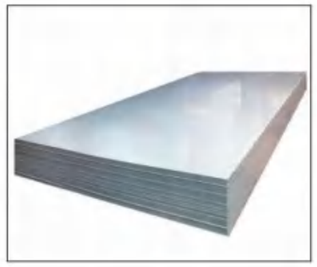

carbon steel sheet
Carbon plate is poured with molten steel, cooled and pressed into flat steel.
It is flat, rectangular and can be rolled directly or cut from a wide strip of steel.
Steel plate by thickness, thin steel plate < 4 mm (minimum 0.2 mm), medium thickness steel plate 4~60 mm, extra thick steel plate 60~115 mm.
The steel plate is rolled into hot rolling and cold rolling.

镀锌钢板 Galvanized sheet

Galvanized sheet

We adopted the UEC hot dip galvanized process which is the most advanced and wild used in the world .The main specification of product is 0.20-0.80mmx800-1250mm.We could manufacture high performance of GI with high zinc coating, none-spangle ,minimum spangle ,regulatr spangle or big spangle along with the advanced processing of oiled or skin-passed. The proudct can be used in building materialas ang electrical appliance

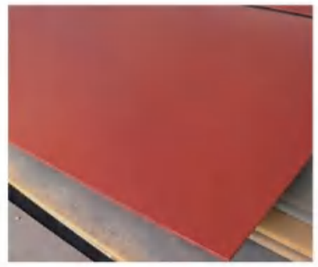

CHARACTER:

* The surface of galvanized sheet is smooth without any zinc slag and burr.The appear ance showed silver white.
* The thickness of zinc coating is under control and it can be adjust as custmers wish .
* Have good welding performance and forming property .
* Our products show good corrosion which would pass 96 hours salt spray test ,while the GB O is 72h0urs,
* Our products can be last ten years in the orginal property .

耐磨板 Wear plate

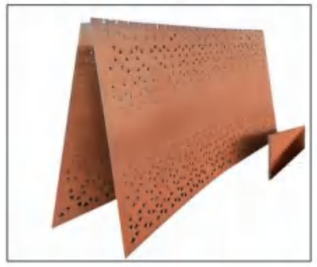

Wear-resistant steel plate has high wear resistance and good impact performance. It can be cut, bent, welded, etc., and can be connected with other structures by welding, plug welding, bolting, etc., which saves time in the repair site process It is widely used in metallurgy, coal, cement, electric power, glass, mining, building materials, bricks and tiles and other industries. Compared with other materials, it has a high cost performance.

The wear-resistant steel alloy wear layer and the matrix are metallurgically bonded. The high-hardness self-shielding alloy wire is uniformly welded to the substrate by a special equipment using an automatic welding process. The number of composite layers ranges from one layer to two layers to multiple layers. Due to the different shrinkage ratio of the alloy during the compounding process, uniform transverse cracks appear, which is a remarkable feature of the wear-resistant steel plate.

Wear-resistant steel plate has high wear resistance and good impact performance. It can be cut, bent, welded, etc. It can be connected with other structures by welding, plug welding, bolting, etc. It has time saving in the process of maintenance. And convenient features.

耐候板 Weather resistance plate

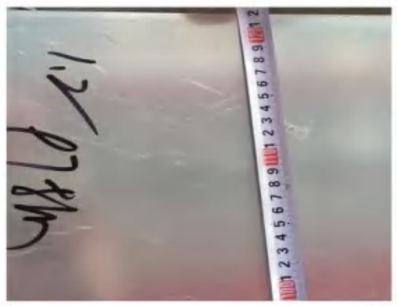

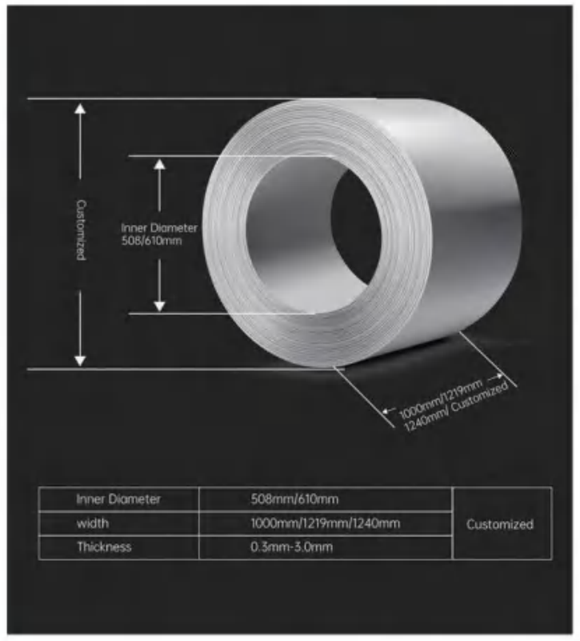

It has a prominent visual effect, the weather plate will change with time. The brightness and contrast of its color are higher than the usual building raw materials, so it is very easy to show under the background of green plants in the garden landscape. In addition, the unsmooth surface caused by the rust of the thick steel plate makes the building more rich in volume and quality.
