光触媒灭蚊器

Photocatalyst Pest Trapper

什么是光触媒灭蚊灯？

光触媒灭蚊灯是一种模仿蚊虫喜欢的某些特性，通过释放一定量的二氧化碳、水分和热量来吸引蚊虫进入并杀死它们的装置。

工作原理：

采用光触媒技术，通过紫外线照射二氧化钛来产生活跃的光触媒和具有强氧化作用能杀死细菌，抑制病毒活性的羟基自由基，过程中同时释放出适量的二氧化碳和水分去分解空气中的有害物质，而最终的剩余物只是一小量的二氧化碳和水。在杀毒和分解过程中，蚊子就会像人类呼吸一样的湿润的二氧化碳所吸引，同时也会被它们喜欢的由UV灯管所发出的365纳米的波长所吸引。除此之外，蚊子还会被引诱剂和流动的气流所吸引。最终蚊子会被安装在底座之上的强劲旋涡型风机吸入并困于底座之内直到风干或被内置高压电击死。

What is a photocatalyst mosquito killing lamp?

Photocatalyst mosquito killing lamp is a device that imitates some human characteristics liked by mosquitoes and attracts mosquitoes to enter and kill them by releasing a certain amount of carbon dioxide, water and heat.

Working Principle:

Photocatalyst technology is adopted to irradiate titanium dioxide with ultraviolet light to produce active photocatalyst and hydroxyl radical with strong oxidation, which can kill bacteria and inhibit virus activity. In the process, an appropriate amount of carbon dioxide and water are released to decompose harmful substances in the air, and the final residue is only a small amount of carbon dioxide and water. In the process of anti-virus and decomposition, mosquitoes will be attracted by moist carbon dioxide like human respiration, and will also be attracted by their favorite 365 nm wavelength emitted by UV lamps. In addition, mosquitoes will also be attracted by attractants and flowing airflow. Eventually, mosquitoes will be sucked in by the powerful rotary nest fan installed on the base and trapped in the base until they are dried or killed by the built-in high-voltage electricity.
