Fully charged in 2 hours and lasts for 8 hours.

Operation for Scan Me and Air tag products

SCAN Me

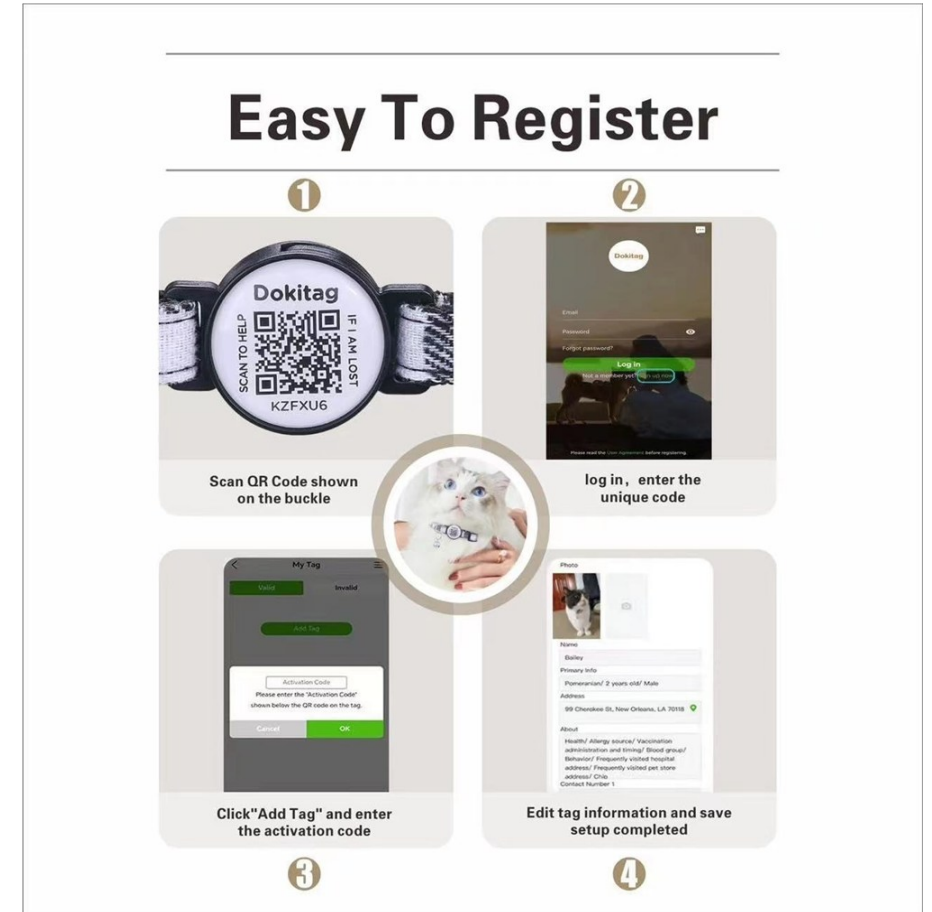

- Register the pet's information and the information of the Pet as well as the Pet's owner in the QR code.

Air Tag

- This locator works with both Android and Apple Devices.
- No distance limit-it's usable worldwide. As long as there's any Apple or Android device within 10-15 meters nearby. It can be located.
- If there are nearby Apple or Android devices, it can achieve near-real-time location updates. The more devices around, the more accurate it is.
- If no devices are nearby, it won't update until one appears (location updates may have a 5-15 minute interval).
- The device emits a secure Bluetooth signal every two seconds. Nearby Apple or Android devices (phones, computers, tablets, etc.) receive the signal and upload it to the Devices' iCloud server to generate location data. Only the owner of the locator can access this data. The more devices nearby, the faster and more accurate the updates.
- It works best in busy urban areas or places with Apple or Android users. It is less suitable for remote areas or places with fewer Apple or Android users-please consider your own situation before purchasing.
- It may be due to a lack of nearby Devices. Location updates require 5-15 minutes.
- (Bluetooth locators are less accurate than GPS, but GPS requires a SIM card, data plan, and frequent charging).

BLUETOOTH LOCATOR ADVANTAGES:

- No extra fee
- Energy-efficient: one CR2032 button battery lasts around a year
- Compact, stylish, and affordable.
