## Company introduction

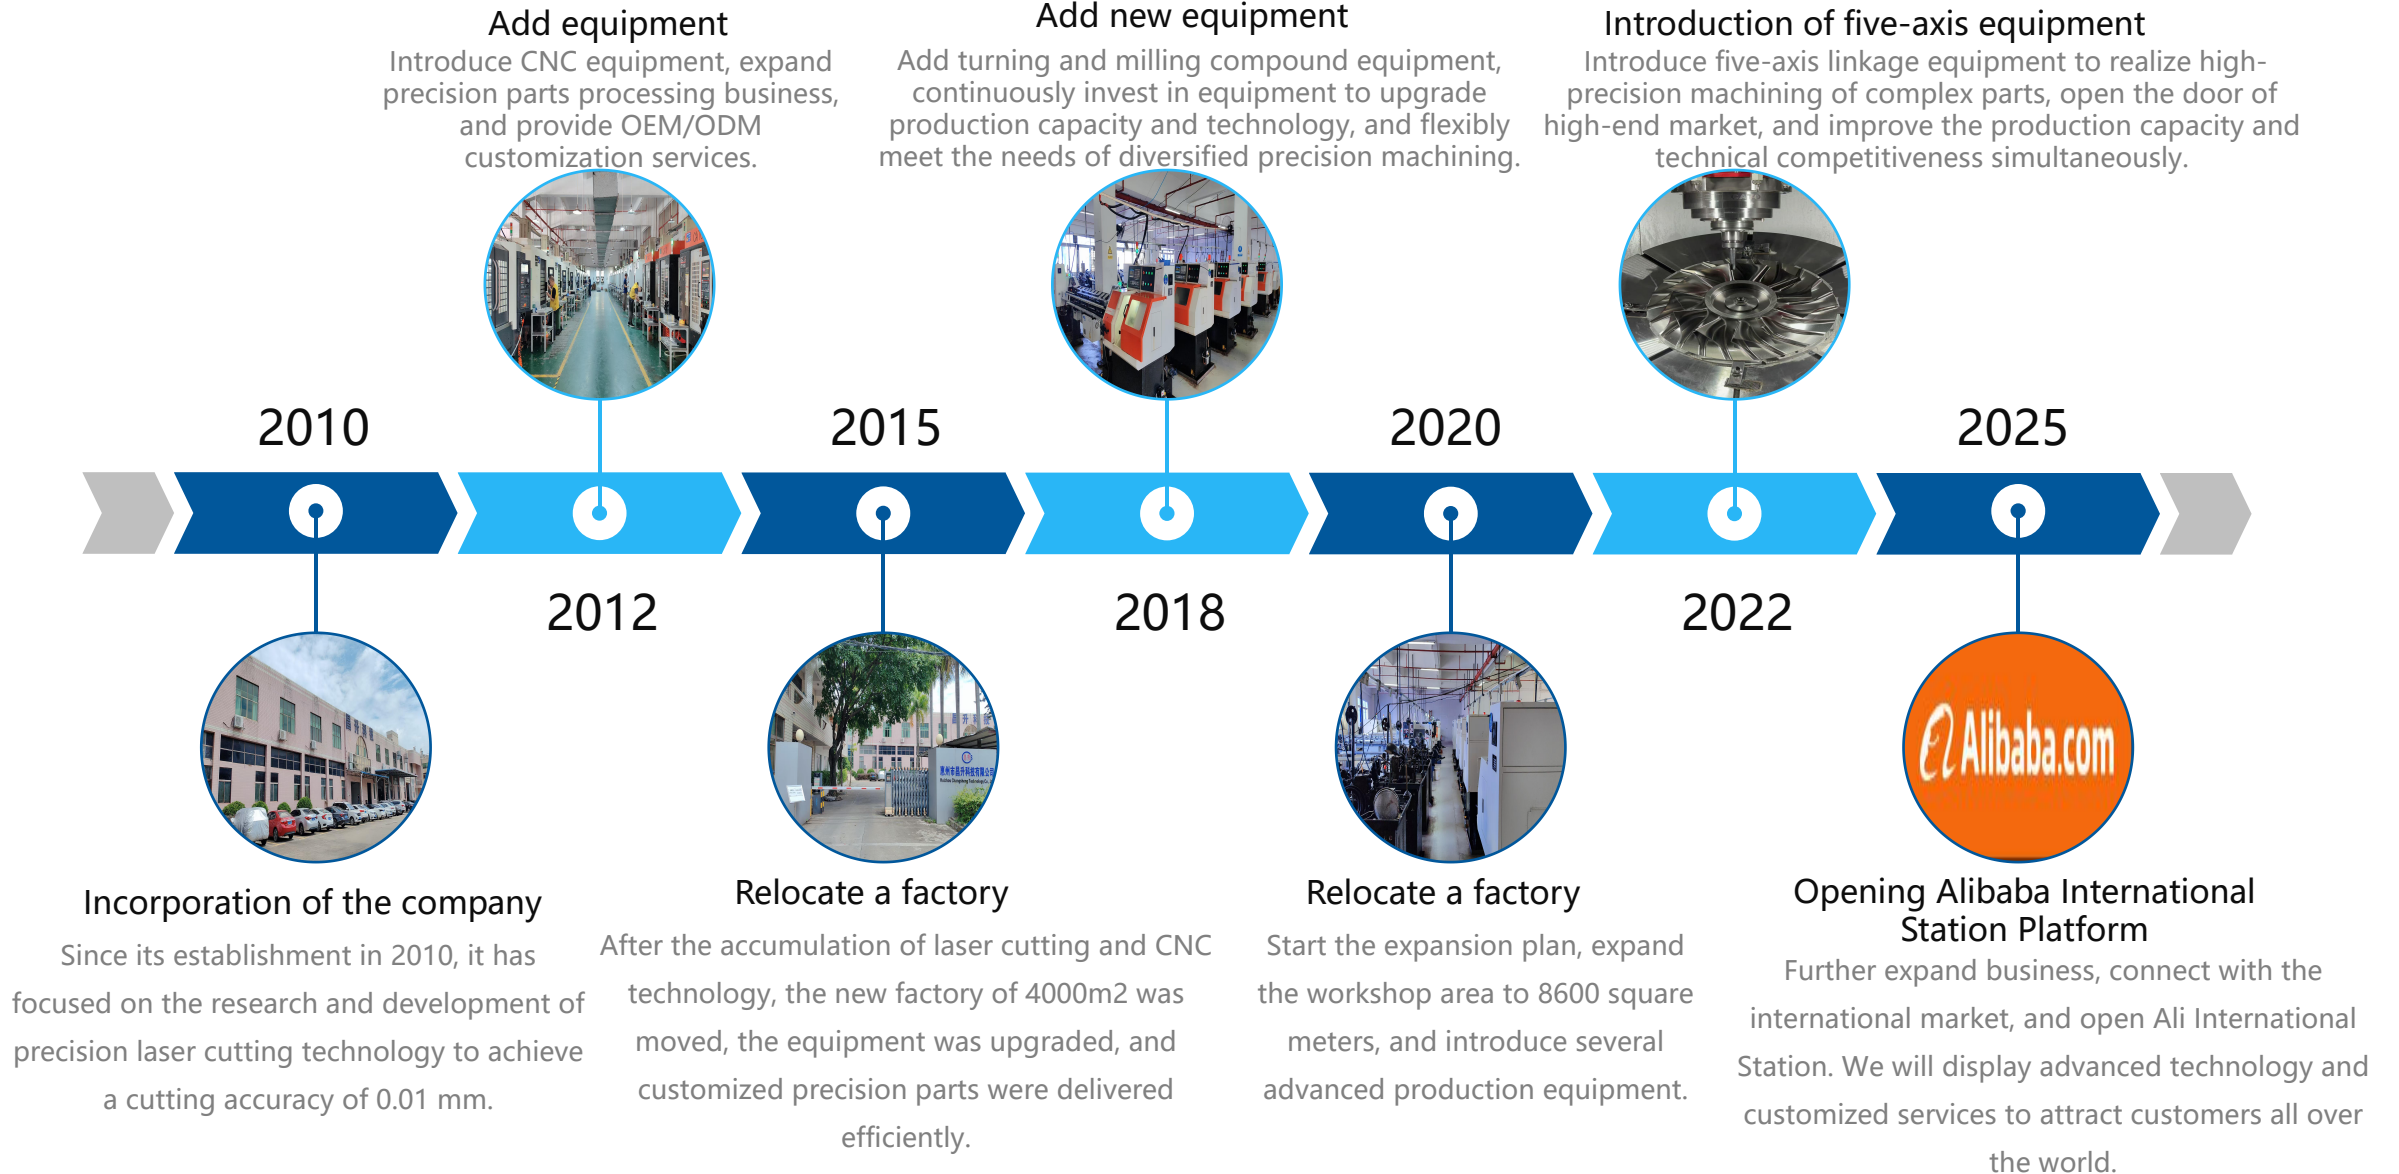

### **Huizhou Changsheng Technology Co., Ltd.**

Founded in 2010, located in Huizhou, the core area of Guangdong-Hong Kong-Macao Greater Bay Area, is a high-tech enterprise specializing in the production of precision parts. With more than 100 employees, more than 30% of the team is composed of technical R&D and quality control personnel, led by senior engineers and composed of experienced professionals.

The company has a variety of advanced production equipment and complete sets of testing equipment, such as five-axis machining center, three-axis machining center, turning-milling compound machine tool and precision laser cutting machine, and has established a mature manufacturing system integrating high-precision machining, whole-process testing and system assembly. Relying on ISO 9001 quality management system certification and strict process control, the traceability of the whole chain from raw material purchase to finished product delivery is ensured, and the stable control of product precision is maintained.

Adhering to the business philosophy of "customer first, quality first", the company focuses on frontier fields such as medical devices, aerospace, semiconductors, robots and high-end industrial tools, and provides customers with one-stop solutions covering design drafting, process development and mass production. With its modular processing capacity and rapid response mechanism, the company has established long-term strategic partnership with many leading domestic and foreign enterprises in the industry.

## Cnc milling

Machinable materials:  
aluminum, stainless steel,  
steel, copper, plastic, iron.

Precision:  $\pm 0.005\text{mm}$

Application fields: auto parts,  
equipment parts, aviation  
parts, medical parts and  
electronic components.

## Turn-milling compound machining

Machinable materials:  
aluminum, stainless steel,  
steel, copper, plastic, iron.

Precision:  $\pm 0.005\text{mm}$

Application fields: auto parts,  
equipment parts, aviation  
parts, medical parts and  
electronic components.

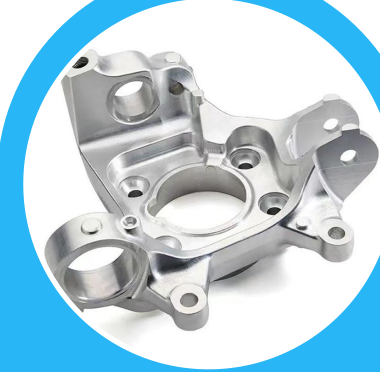

## Laser cutting of sheet metal stamping

Machinable materials:  
aluminum, stainless steel,  
steel, iron

Precision:  $\pm 0.05\text{mm}$

Application fields: auto  
parts, equipment parts

## Five-axis machining

Machinable materials:  
aluminum, stainless steel, steel,  
copper, plastic, iron.

Precision:  $\pm 0.005\text{mm}$

Application fields: auto parts,  
equipment parts, aviation parts,  
medical parts and electronic  
components.

## Wire cut process

Machinable materials:  
aluminum, stainless steel,  
steel, copper, plastic, iron.

Precision:  $\pm 0.005\text{mm}$

Application fields: auto  
parts, equipment parts

# 企业文化 Corporate culture

## **Honesty**

Truthfully disclose product information to customers without concealing defects.

Settle accounts with suppliers on time and maintain the credit ecology of the industrial chain.

Integrity is the cornerstone: the lack of integrity will lead to the meaningless promise of quality, service and speed.

## **Quality**

High-precision equipment and testing instruments are used to control tolerances in manufacturing industry.

Establishing SOP (standard operating procedure) in service industry to ensure service consistency

It is the foundation for enterprises to settle down and decide customers' long-term choice.

# CangSheng

Uphold the four truths

## **Service**

Provide free sample testing or scheme design before sale.

Establish 24-hour online service after sale to solve problems for customers.

Turn product value into user experience and strengthen emotional connection.

## **Speed**

Arrange production cycle according to customer requirements

The manufacturing industry compresses the R&D cycle through concurrent engineering (such as simultaneous design and process planning).

With efficiency as the core, shorten the cycle from demand to delivery, including decision-making speed, production speed and response speed.
