香菇菌棒产品说明/Shiitake mushroom spawns description:

Our base produces two types of mushroom spawn: the long-aged 808 series and the short-aged 0912 series. The long-aged 808 series produces high-quality shiitake mushroom with a spawning cycle of approximately 150 days and an accumulated temperature of approximately 2700°C. The shiitake mushrooms are perfect round and caps are thick. The body is medium to large. However, their fruiting rate is relatively low. The short-aged 0912 series has a spawning cycle of approximately 120 days and an accumulated temperature of approximately 1800°C. The capacity is pretty high with a bioconversion rate of up to 85%. If properly managed, they can also produce shiitake mushrooms with perfect round shapes, short stems and thick caps.

本基地菌棒菌种主要分两种:

长菌龄808系列与短菌龄0912系列。

长菌龄808系列号称优质股代表, 发菌周期约150天, 积温在2700摄氏度左右。香菇菇行圆正, 肉质肥厚, 菇体中等偏大, 适宜做高档鲜香菇。但出菇率相对较低。短菌龄0912系列发菌周期约120天, 积温在1800摄氏度左右。产量高, 生物转化率达85%。但是如果管理不当, 爆发出菇时菌柄细长, 菌盖薄而小, 畸形菇多, 商品性不好。但是如果管理得当, 也能产出菇形圆正柄短叶厚质地坚实的香菇。
