THE INDIAN POTTERY

Health Benifits
OF USING
CLAY POTS

1. Retains Nutrition of Food:

As earthen/clay pots are porous in nature, It allows both moisture & heat to circulate through the food which retains the nutrition of the food & for the meat lovers, cooking meat in clay pots keeps it soft & tender.

2. Retains Minerals of the food & Neutralises the pH Balance:

Once the acidity present in the foods reacts with the Alkaline present in the clay, the pH balance gets neutralises which makes the food tastes better & healthier too. Various studies have found that cooking in clay pots provides many beneficial minerals to the human body like calcium, magnesium, iron, phosphorus & sulphur.

3. Good for Heart:

The cooking in clay pot requires No or very less oil, as it is naturally resistant to the heat which slows down the speed of cooking, hence it helps in retaining the natural oil & moisture of the food.

4. Enhances the Natural Aroma of the food:

Because of the slow cooking & porous nature of the clay, the pot retains the natural moisture & aroma of the food which gets further enhanced by the earthen flavour of the clay.

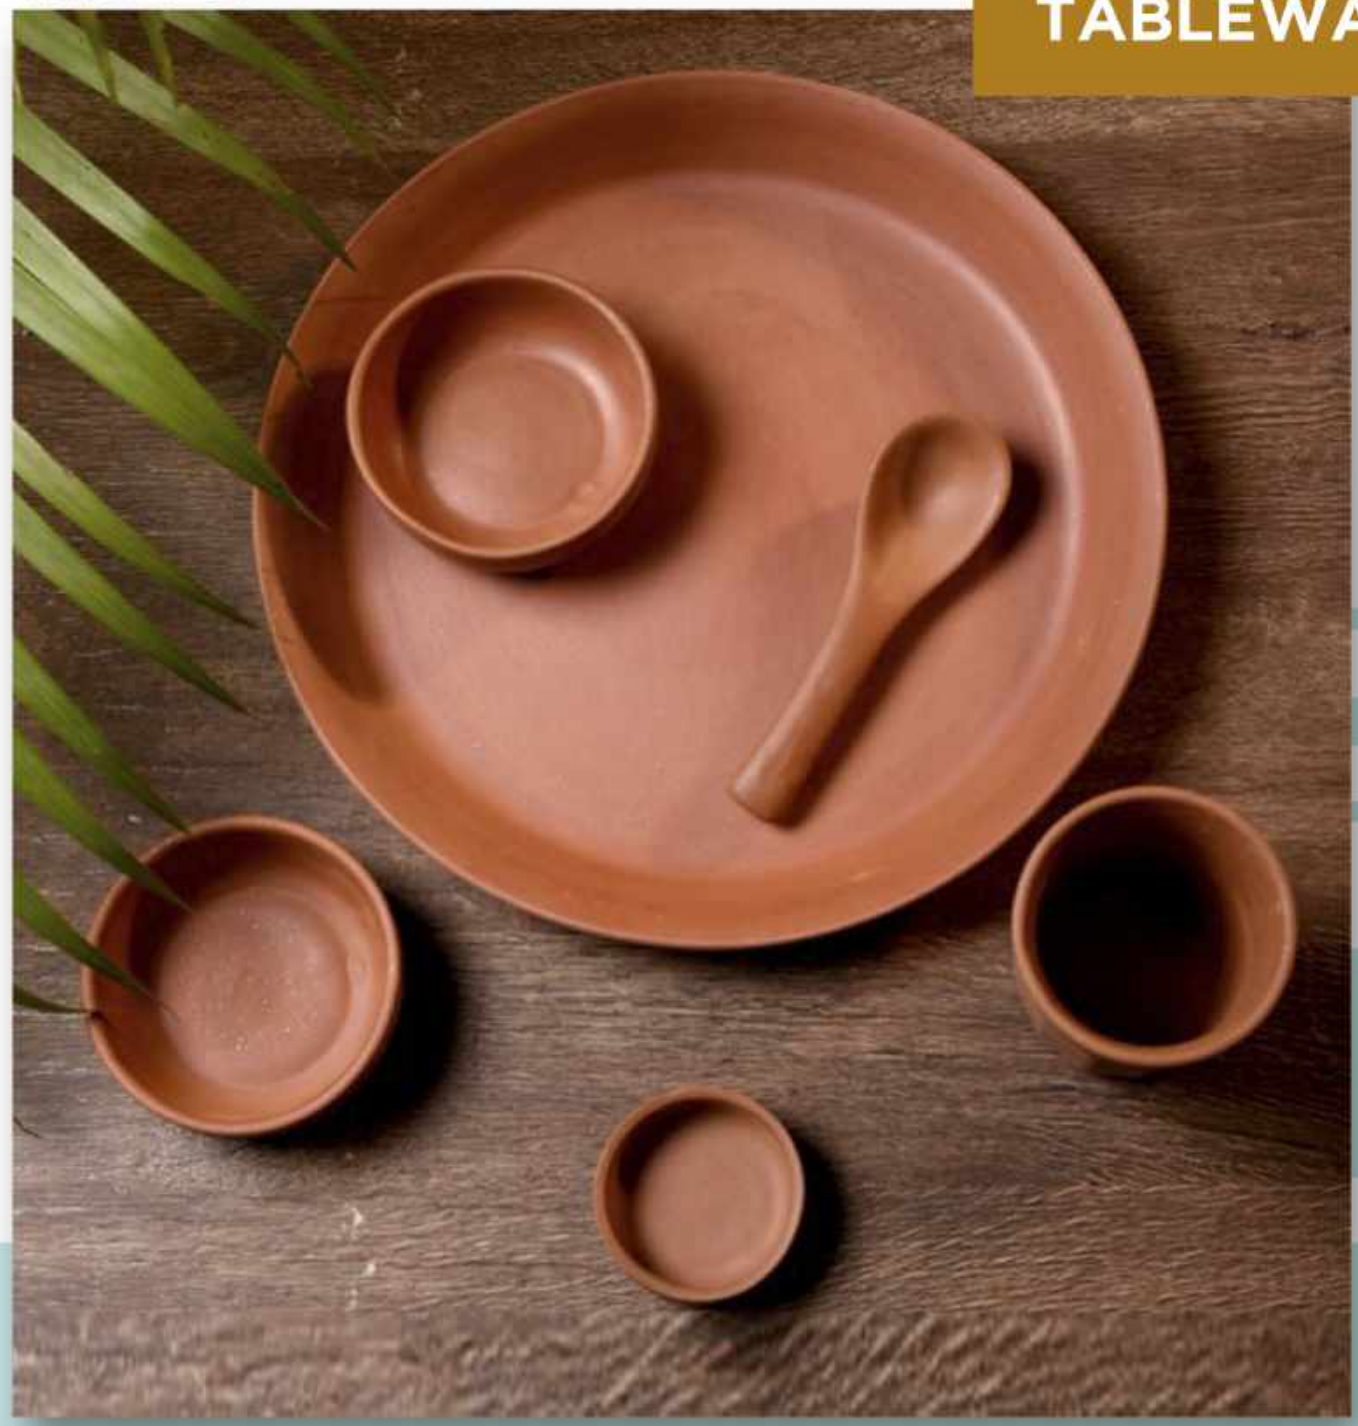

5. Economical & Environment Friendly:

Earthen pots are light, both on pocket & environment, which is of extreme importance for the time & age we are living in. The clay pots are 100% biodegradable & if handled well can last really long.

THE INDIAN POTTERY

TABLEWARE

Earlier, Clay utensils used to rule the country. Every household kitchen had clay pots, plates and bowls made out of clay but globalisation replaced those utensils with stainless steel. With development also came the harmful effects of steel utensils. But worry no more! IPots has got you covered. These Clay Tableware are not just beautiful for the eyes but completely feasible as well. Easy to use, these tableware are a shine for your dining table. Electric friendly, these can be put in microwave/oven for heating the food. Not to mention that these clay tableware are environment friendly, crafted by the artisans from remote areas of India.

THE INDIAN POTTERY

SERVING DISHES

Are you tired of storing your crystal crockery and taking them out every time you have guests at your place? Well, here is some unique range of serving dishes made out of clay by the skilled artisans of India. The phrase old is gold has its significance in the present era. When clay pots and dishes were used in the earlier times, people used to be much healthier and fitter than they are today. Clay utensils add nutritive values to the food such as, calcium, phosphorous, iron and magnesium. IPot, with the help of local artisans has designed these amazing serving dishes made out of clay to keep you fit, healthy and happy. The food will taste much better when cooked in these dishes as well as its moisture will be retained for the whole day when stored in these dishes.

THE INDIAN POTTERY

WATER BOTTLE

Drinking water from a clay bottle keeps the natural level of water cool which in turn helps in improving the metabolism of your body. It's not easy to carry that heavy silver bottle with yourself every time you go out during summers. With these great quality clay water bottles, you don't have to worry about carrying them around with a heavy weight as these are 100% feasible as well as economical. Let's pledge to not use plastic water bottles as they are hazardous towards the environment, rather, use the clay water bottles to have a natural cool sip of water to fulfil your thirst.

iPot
THE INDIAN POTTERY

HARMFUL EFFECTS OF MODERN DAY UTENSILS

1. Harmful Effects of Non-Stick Cookwares

Non-stick cookwares are coated with Teflon, containing cadmium & mercury which can create serious heath issues like cancer, heart disease & longer usage of the same can also result in mental & nerve disorder.

2. Harmful Effects of Melamine Crockery/ Utensils

Melamine is a chemical used to make plastic products harder & durable. Various Food safety organisations globally have ascertained that Melamine crockery/utensils should not be used for infants, young kids and it should be refrained for using for highly acidic food & for hot food too.

3. Harmful Effects of Stainless Steel Utensils

Stainless Steel is a metal alloy made of mixture of Nickel, Silicon, Chromium & Carbon and even the slightest disbalance of this mixture can proved to be harmful for the body.

4. Harmful Effects of Aluminium Crockery/Utensils

It is always advisable to avoid cooking in Aluminium, as it heats up very fast & reacts easily with acidic food which can be harmful for the human body.

iPot
THE INDIAN POTTERY

The Best way to use

Earthen Pots

- The new earthenware should be dipped in water for 3-4 hours before the first usage
- Later it should be dipped in water for 15-20 minutes before every use.
- Maintain same temperature while cooking, preferably the temperature not more then 190 Celsius to 250 Celsius
- Cook the food in earthenware for 15-20 minutes longer then the regular utensil.
- Never add cold water or vegetables in between the cooking.
- As with all the utensils be careful while the clay pot is hot.

iPOt
THE INDIAN POTTERY

• AN INNOVATIVE CLAY PRODUCTION HOUSE •

Earthenware is the oldest form of pottery which has largely maintained its originality & stood the test of time. It follows the simple but laborious process wherein after giving the desired shape to the clay, the potter heats it into relatively high temperature (around 900 celsius). This heating causes the change of the colour to brown, black & reddish-brown depending on the type of clay used. The iron content present in the clay causes the change in colour to reddish-brown & this reddish-brown earthen pot is also known as Terracotta.
